2001  
MOLASSES MARKET NEWS - ANNUAL SUMMARY

HIGHLIGHTS OF 1970 //

Prices of molasses generally declined during 1970 with the closing prices around 8 percent below a year earlier. However, prices for the year averaged 12 percent above the 1969 level. Supplies of molasses, both imports and domestic production, were higher than in 1969. The increased demand from the feed industry kept supply and demand in fair balance.

PRICES

Cane Molasses

Prices of cane blackstrap molasses during 1970 showed only minor changes during the year. From January through April the price at New Orleans held steady at 15¢ and from mid-August through December the price held at 13-1/2¢ per gallon. Prices declined around 1-1/2¢ per gallon during May, June and July. Although prices closed 1-1/2¢ under the closing price of 1969, the average price was about 1-1/2¢ above the 1969 average. Prices at interior markets were mostly 2-3¢ per gallon above a year ago, reflecting freight rate increases. The most significant factor responsible for the narrow price range was the discontinuance early in 1970, of the practice by sellers of providing for a "guarantee against price decline." Also, increases in freight rates, both ocean and rail, plus off-shore replacement costs and increased feed usage, moderated the normal sharp down-turns.

Beet Molasses

Prices during 1970 followed the same mixed trend as the past few seasons. Prices in the Oregon-Utah-Idaho area, where competition from cane molasses is light, held unchanged all year at \$37.00 per ton. In the Colorado-Wyoming-Montana area, the product found good demand and prices advanced \$1.50 above the 1969 average. The principal use of this product continued to be as an additive to beet pulp, which moved to the heavily concentrated feedlots located in the area. Liquid supplies were adequate to meet demands.

Citrus Molasses

Despite increases late in the year, prices of citrus molasses in 1970 averaged about 75¢ per ton under the year before. Quotations the first months of 1970 held at a steady level of \$17.50 per ton. Increased demand and a supply clean-up, however, raised the 1970 closing price to \$19.00 per ton. The major portion of citrus molasses was added to citrus pulp and sold for feed.

Corn (Hydrol) Molasses

Prices of corn molasses followed cane molasses and showed a price reduction of almost \$3.00 per ton during the year. The 1970 annual average price of \$31.50 per ton was about \$2.50 higher than last year's average.

## Comparative Values

The relationship between corn and molasses prices continued to favor molasses during 1970. The higher corn prices last summer and fall more than offset the increased molasses prices. Over the long-term molasses and corn prices about equal out, assuming 6-1/2 gallons of molasses has the equivalent feeding value of one bushel of corn.

## SUPPLY AND DISTRIBUTION

Production of mainland blackstrap in 1970 was estimated to be about 13 million gallons greater than 1969. Increased in-shipments from Hawaii and Puerto Rico contributed to the higher supplies. These two areas shipped about 7 million gallons more than last year. Assuming an extraction rate of 5.4 gallons per ton of beets, the production of beet molasses in 1970 would be down about 12 million gallons from the record of 152 million gallons produced during the 1969 harvest season.

Molasses imports from foreign countries totaled 382 million gallons, an increase of 20 million over last year. This volume continues the upward trend of recent years and indicates an aggressive demand by cattle feeders for molasses. Imports of about 81 million gallons of molasses from Mexico and 34 million gallons from the Dominican Republic were respectively 31 and 10 million gallons lower than in 1969. Despite this decrease, these two countries shipped about 30 percent of the total volume imported. Gains of about 10 million gallons were posted from Australia and Brazil. Kenya, normally a small shipper, exported about 7 million gallons of molasses, about seven times it's normal volume. New Orleans continued to be the principal receiving point, handling 130 million gallons, about 35 percent of the total imports. Receiving districts in Southern California showed total declines of about 21 million gallons which is about the same as in years prior to 1969. Northern California points remained about unchanged. Imports at New York continued to register declines, with the total received amounting to about 50 million gallons compared with 55 million gallons in 1969 and 70 million gallons the previous year.

Total available supplies were at a record high of 750.4 million gallons about 35 million gallons more than a year ago and 12 million more than the previous high established in 1968. Industrial utilization in the manufacture of distilled spirits and pharmaceuticals was estimated to be slightly higher than in 1969. Available supplies for feeding livestock in 1970 established a record of 588 million gallons. This represented an increase of 33 million over a year ago.

1/ A "rule of thumb" measure-- 6-1/2 gallons of molasses are about equivalent in carbohydrate value to one bushel of corn--is widely used to compare the carbohydrate value of molasses and corn. This measure is based on experiments conducted to evaluate the energy produced from one bushel of corn and the amount of molasses required to produce the same amount of energy.
